

(Senior) Software Engineer Backend

Are you a seasoned backend software engineer seeking a hands-on role that challenges your skills and impacts societal norms? Monkee, a fintech startup based in Innsbruck, is actively seeking a (Senior) Backend Software Engineer to join us in redefining consumer savings through our "Save Now Buy Later" approach.

Your Mission:

As a Backend Software Engineer at Monkee, your primary responsibility is to integrate a new banking provider into our platform, elevating our product offering to meet the evolving needs of our customers.

What You'll Tackle:

- Drive the design and implementation of our **backend services**.
- Boost **speed and reliability** to gear up for the next phase of growth.
- Play a pivotal role in shaping the **engineering roadmap**.
- Collaborate cross-functionally to deliver **impactful solutions**.

Your Profile:

- A pragmatic team player with a focus on creating social impact through technology.
- Solid coding skills and a penchant for crafting structured, testable code.
- A degree in Computer Science or equivalent work experience.
- Proficiency in developing backend solutions, particularly in Node.js and Typescript.
- Bonus: Previous experience in the financial services sector.

What's in it for you:

- Join an early development team at a venture-backed startup where your work shapes the product and directly impacts lives.
- Competitive salary with performance-based incentives.
- Enjoy flexibility with working hours and remote work options.
- Work from a central office in Innsbruck, surrounded by a collaborative team eager to welcome your expertise.

Ready to tackle meaningful challenges in fintech? Eager to contribute to a startup that's changing the game? Apply now by sending your application to **Martin Zarfl** at careers@monkee.rocks.
